To whom it may concern.

**<Company Name>** contracted Cobalt to perform a series of penetration tests against their mobile and web applications and API, to assess **<Company Name>'s** risk posture and identify security issues that could negatively affect **<Company Name>'s** data, systems, or reputation.

Cobalt performed the following tests:

**Web** - between <Start Date> and <End Date>

These penetration tests included a manual assessment of the security of the applications' functionality, business logic, and vulnerabilities, including those catalogued in the Open Web Application Security Project (OWASP) Top 10. The assessment also included a review of security controls and requirements listed in the OWASP Application Security Verification Standard (ASVS). While completing these assessments, the pentesters leverage tools to facilitate their work, but the majority of the assessment involves manual analysis.

As the pentesting team identified vulnerabilities, they reported all of these issues to **<Company Name>** for remediation.

Sincerely,  
The Cobalt Team
