To whom it may concern:

Cobalt conducted a gray box penetration test of the **<Asset Name>** application to assess its risk posture and identify security issues that could negatively affect **<Company Name>**'s data, systems, or reputation. The scope of the assessment covered **<Asset Name>** and included credentials for various levels of privilege within the applications. The pentest was conducted by **<Number>** pentesters between **<Start Date>** and **<End Date>**.

This penetration test was a manual assessment of the security of the application's functionality, business logic, and vulnerabilities, such as those cataloged in the [Open Web Application Security Project \(OWASP\)](#) Top 10. The assessment also included a review of security controls and requirements listed in the OWASP Application Security Verification Standard (ASVS). The pentesters leveraged tools to facilitate their work. However, the majority of the assessment involved manual analysis.

As the pentesting team identified vulnerabilities, they reported all of these issues to **<Company Name>** for remediation.

Sincerely,  
The Cobalt Team
